General Concept

In general, JFS plugin works as a filter applied to pages generated by JIRA. This allows to keep an amount of changes to original JIRA source code as small as possible, thus improving overall stability and maintainability. On the other hand, such an approach requires that every page is processed properly. This can only be guaranteed for plugins that have been explicitly tested for compatibility with JFS.

JFS by default blocks an access for all users to the pages (identified by their URLs), which it does not know how to process. This can result in incorrect behavior of some plugins.

Issue Views & Screens

Issue View

Secured custom fields are removed both from "current values" sections and from change history. If any change group occurs to be empty after change item removal, it will be also removed.

Issue Navigator

Secured fields are removed from issue table with respect of each issue. For example, one can use "Reporter" condition to make some field visible only for issue's reporter.

Before:

Displaying issues 1 to 2 of 2 matching issues.

T	Key	Summary	Reporter	My Secret Users	Multi Select	Date Picker	
	MGM-6	test summary	Administrator	Administrator , Alex Shchagin	Option 2 , Option 3 , Option 4	16/Jun/10	
	MGM-5	new bug	Alex Shchagin	Administrator	Option 3 , Option 4	17/Jun/10	

After (logged in as Administrator):

Displaying issues 1 to 2 of 2 matching issues.

T	Key	Summary	Reporter	My Secret Users	Multi Select	Date Picker	
	MGM-6	test summary	Administrator	Administrator , Alex Shchagin			
	MGM-5	new bug	Alex Shchagin				

Security Scheme Settings:

Field	N	Condition	Allow/Deny	Operations
Date Picker (customfield_10080)	Add Rule... Remove Field			
	1.	Everyone (5)	Deny	Allow Delete
Multi Select (customfield_10090)	Add Rule... Remove Field			
	1.	Everyone (9)	Deny	Allow Delete
My Secret Users (customfield_10030)	Add Rule... Remove Field			
	1.	Reporter of the Issue (12)	Allow	Deny Move Down Delete
	2.	Everyone (7)	Deny	Allow Move Up Delete
